

THE SOULGEIST (SG) TECHNICAL PACT

I. The Essence Soulgeist (SG) is the utility token that powers the "Camino al Mictlán" ecosystem. Its purpose is to serve as the fundamental medium of exchange for the souls traversing this digital path, enabling secure and gamified distribution of cryptographic assets.

II. The Technical Shield (Security) The Mictlán is not a place for bots or imposters. Our system is protected by:

- Smart Contract: ERC-20 compliant, optimized on the Polygon network to ensure fast and secure transactions.
- Anti-Abuse System (Redis): Constant surveillance that blocks automated behaviors in real-time.
- VPN & Behavioral Filtering: Algorithms that detect and restrict suspicious access, ensuring benefits reach only those genuinely traversing the path.
- Real-time Auditing: Every withdrawal and movement is tracked and notified, maintaining total transparency of the ecosystem.

III. Tokenomics

- Token Name: Soulgeist (SG)
- Network: Polygon (PoS)
- Total Supply (Max Supply): 200,000,000,000 SG
- Initial Distribution:
 - Initial Burn: 5%
 - User Vault: 40%
 - Operational Fund (Gas/Utility): 15%
 - Events & Marketing: 20%
 - Master Reserve: 20%

IV. Roadmap

- Stage 1: Contract deployment and security hardening (Completed).
- Stage 2: Official launch and ecosystem stabilization.
- Stage 3: Expansion into decentralized exchanges and new utilities for SG holders.
